Summary Document

Tasks:

These 15 tasks were all tested on 5 individuals. I often tested people two at a time, to make the testing more fun and to promote some slight competition. The people would be administered the tasks, while they would be timed and have their clicks counted.

Task Name	Goal	Starting Condition	User Instructions (Hints)	Expected Outcome / Completion Condition
Check next confession time	Find the time of the next available confession.	Port dashboard.	Use the calendar on the port dashboard.	Next avalable time is visable on screen.

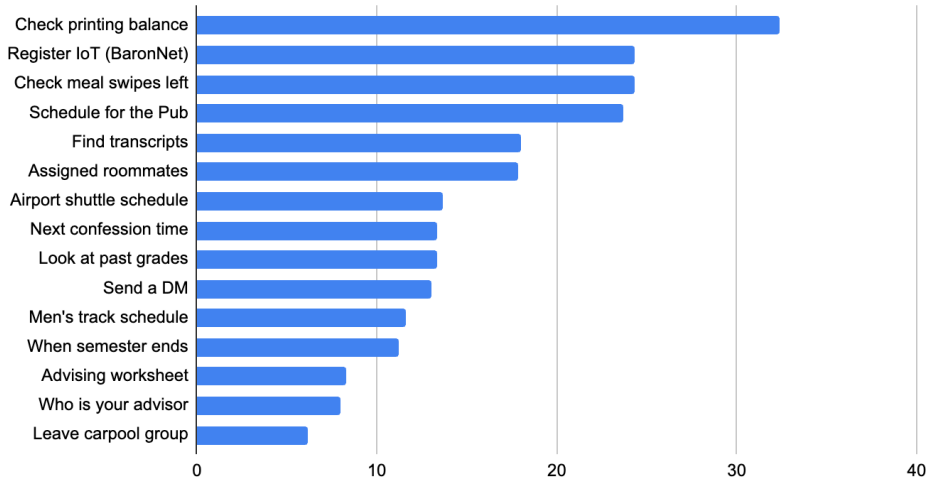
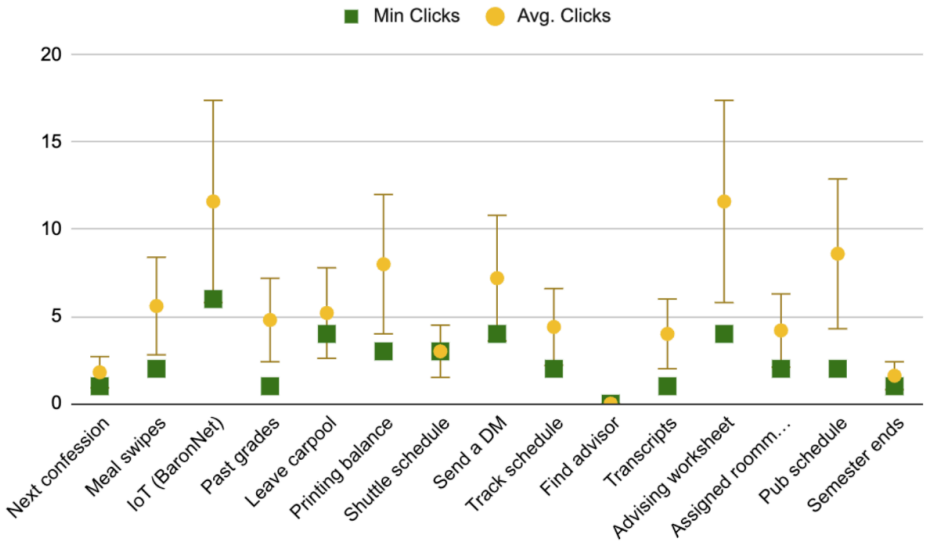
Find advising worksheet	Load the advising worksheet to check course needs.	Port dashboard.	Use the search bar, click "view all details," then cli	The advising worksheet is successfully opened.
Find assigned roommates	Identify names of current roommates.	Port dashboard.	Search for "Housing" or "Residence Life" in the po	Roommate names are visible.
Find schedule for the Pub	Determine operating hours for the on-campus pub.	Port dashboard.	Search for "Dining Services" or "The Pub" in the se	Hours of operation for the Pub are displayed.
Find semester end date	Locate the final day of the current academic term.	Port dashboard.	Search for "Academic Calendar" in the portal.	The date for the end of the semester is visible.

Plots:

This plot displays the ‘friction score’ for different tasks. The friction score for each task was found by dividing the average time by the average clicks. This number helps represent how obscure a path to a given page is, since it calculates the time needed to think/find the next click. Also, the top pages here are also ones that aren’t particularly well known, since the advising worksheet is also fairly hidden, but people use it enough to know where it is.





This plot displays the minimum and average clicks for each task. These numbers help represent how long the path to a given page is. The top pages here are connecting a console to IoT and accessing the advising worksheet.
